2nd Amendment RFID Concealment Shelf Foam Insert Instructions

The easiest way to cut out your 1" thick foam insert is to lay the foam on a flat surface that is suitable for cutting, like a table with cardboard underneath.

(All weapon owners should know to keep their firearms unloaded.)

Step 1: Lay items you are wanting to store on foam and orient to your liking.

Step 2: Using a fine-tipped pen or the tip of an Exacto knife, trace around your items. (Pay close attention when tracing items. The tighter you can trace to the item, the better your finished product will look.)

Step 3: Remove your foam backing from within the shelf and place your foam insert on a protected surface to cut your foam.

Step 4: Using a sharp knife, cut foam through to bottom of the foam backing adhesive paper to **make sure the gun and / or clip fit completely into your foam insert or your shelf will not close properly.**

Step 5: Check fitment of your items frequently to ensure a proper fit.

Step 6: Remove the peel adhesive backing and insert the foam onto your shelf, and then insert your items.
